## [ reached 'max' / getOption("max.print") -- omitted 39160 rows ]
```

control for country dummies - we have time varied we can include country specific variables (whether or not it is that country or not) so in each data point “is this iran or not, is this afghanistan or not” use the plm package for that main_slides_rs05_practice_daily_notes_rs14_nov22

just pick the variables you really care about think about your punch line - figure out which variables matter and which don't (use t-statistic on multilinear regression)

meet again on wednesday with prof kang

logistic model no neural network (not enough data)
